

Welcome to the GitHub Copilot 1-Day Training Course

Complete the setup before class to avoid delays.

Course Overview

See the [GitHub Copilot 1-Day detailed outline](#) for the course objectives and schedule.

Pre-Class Setup (Required)

1. Follow the [general setup guide for your operating system](#).
2. Choose one track below.
3. Clone that track's repository and complete its OS-specific instructions.
4. Run the verification commands in the track guide.
5. Confirm that both Copilot inline suggestions and Copilot Chat work in your IDE.

Choose your track

Track	Project	Description
Java Track	Spring Boot Personal Expense Tracker	Web application with H2 database
Python Track	FastAPI Personal Expense Tracker	Web application with SQLite
.NET Track	ASP.NET Core Personal Expense Tracker	Web application with SQLite
Python Data Analysis Track	Data Analysis Pipeline	Pandas, Matplotlib, Seaborn

The installation guide includes OS-specific instructions for Windows and macOS.

Checklist Before Class

- ☐ GitHub account with Copilot access enabled
- ☐ Latest VS Code installed, or another supported IDE for your track
- ☐ GitHub Copilot authenticated in the IDE
- ☐ Copilot inline suggestions and Copilot Chat verified
- ☐ Selected track repository cloned
- ☐ Track-specific prerequisites completed:

Track	Prerequisites
Java	JDK 21 and Maven
Python	Python 3.11 or later
.NET	.NET 10 SDK and Entity Framework Core tools
Data Analysis	Python 3.9 or later with Jupyter Notebook
